| BS Integrative Health            | • Develop critical thinking about different therapies, modalities and practitioners.  
                                       • Apply a holistic approach to wellness focusing on the mind, body and spirit. | • Biological, Manipulative, and Body-Based Therapies.  
                                       • Technology: A Tool to Advance Innovation in Health Care. |
| BS Health Care Compliance and Regulations | • Apply the latest regulatory and accreditation standards to policies, procedures and audits.  
                                           • Oversee privacy, information security and regulatory risk assessments. | • Data Security and Privacy in Health Care Compliance.  
                                           • Risk Management in Health Care Compliance. |
| BS Community Health              | • Advocate for diverse individuals, families and communities.  
                                       • Provide health education, health promotion and care coordination.  | • Leaders in Community Health.  
                                       • Changing Health Behaviors. |
| BS Health Care Coordination       | • Encourage collaboration between providers, agencies and patients.  
                                       • Advocate for individual patient needs, and educate patients on their options. | • Population Health Policy and Legislation.  
                                       • Policy and Financial Principles in Health Care Coordination. |
| BS/BAS Health Entrepreneurship and Innovation | • Lead the design, application and testing of innovative processes and products.  
                                              • Incorporate current industry trends with interprofessional teams. | • Health Care Policy: The Innovator’s View.  
                                              • Philosophy of Science in Health Care: Understanding Paradigms of Health and Healing. |
| BSN Nursing                      | • Use evidence-based practices and clinical reasoning to provide high-quality professional nursing care.  
                                       • Support patient success by working in collaborative, interprofessional health care teams. | • Nursing Management in Health Care.  
                                       • Health Promotion Across the Life Span. |

Internships

Students gain practical work experience related to their majors through experiential learning programs offered by our industry partners in conjunction with the Edson College.

Clinical Partners

Edson College partners with many health care organizations in Arizona – including the Mayo Clinic, the VA Clinic and Phoenix Children’s Hospital – to provide hands-on learning experiences for clinical nursing students.

An annual opportunity for students to present their research projects proposing innovative solutions to health issues, providing them experience pitching their research to peers.

HEALab

Study Abroad

Edson College study abroad exposes students to real world health challenges and opportunities that face communities beyond the United States.

Simulations Spaces

Two fully-equipped and state-of-the-art simulation spaces, ready to enable more than 90,000 hours of student experiential learning: The Grace Center and the Health Futures Center.

Health Innovation Exhibition

The first-ever accelerator for ASU students, faculty and the community to launch initiatives that focus entirely on health and health care solutions.
